

## Piercing Aftercare

A piercing is a minor wound which needs care and attention to avoid infection, after your piercing you will experience soreness and some swelling at the piercing site, this is perfectly normal.

How you look after your piercing is most important for full healing to take place, using a clean sterile container, put a quarter of a teaspoon of sea salt into freshly boiled water until dissolved bring it down to room temperature.

Soak a sterile cotton pad into the sea salt and bathe the piercing front and back, it is very important to dry off your piercing with clean sterile cotton buds front and back, this will help to protect the piercing from getting sore and infected, avoid touching the piercing with your fingers until fully healed.

Thank you for choosing Ace Beauty Clinic to do your piercing today.
